PROFESSIONAL SUMMARY

Performance-driven Backend Engineer with a strong track record of architecting, scaling, and deploying robust web applications, fintech integrations, and SaaS platforms. Expert in the Node.js ecosystem, database optimization, and high-throughput API design. Adept at transforming complex business requirements into maintainable, secure code using modern system design patterns, automated CI/CD pipelines, and robust cloud infrastructure workflows.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), HTML5, CSS3

Backend Development: Node.js, Express.js, REST APIs, System Design, WebSockets, Web Scraping (Playwright)

Databases & Caching: PostgreSQL, MongoDB, MySQL, Redis, Sequelize ORM

DevOps & Tools: Docker, CI/CD (GitHub Actions), Swagger/OpenAPI, VPS, SSH, Git, GitHub, cPanel

Architectural Concepts: Scalable Architecture, Dependency Injection, Rate Limiting, Load Balancing, Agile Methodologies

PROFESSIONAL EXPERIENCE

YardPeople — *Founder & Backend Engineer*

Aug 2025 – Present | Lagos, Nigeria

- Architected and engineered a property management platform enabling digital rent payments, automated maintenance tracking, and centralized property operations for landlords and tenants.
- Designed and deployed highly scalable REST APIs using **Node.js**, **Express.js**, and **MongoDB**, fully documented via **Swagger/OpenAPI** templates.
- Integrated localized payment gateways (**Paystack**, **Monnify**) to process financial transactions securely and built cron-job workflows for automated rent reminders.
- Optimized application performance and significantly minimized database resource stress by implementing structured caching layers using **Redis**.
- Protected API ecosystem from distributed abuse and brute-force vectors by designing custom rate-limiting and robust role-based access control (**RBAC**) mechanics.
- Ensured platform stability and high availability during traffic surges by establishing load-balancing strategies and containerizing services using **Docker**.
- Configured automated **CI/CD pipelines via GitHub Actions** to execute continuous integration testing and seamless deployment.
- Developed an immutable audit logging framework to systematically log critical user actions, state transitions, and core system security events.

Cornie Health — *Backend Engineer*

Oct 2025 – Present | Lagos, Nigeria

- Collaborate inside an Agile cross-functional team to develop a high-availability healthcare ecosystem connecting practitioners and patients globally.
- Engineered secure, decoupled, and maintainable enterprise REST APIs utilizing **Node.js** and **PostgreSQL** relational databases.
- Spearheaded a backend code reorganization around **Dependency Injection** architecture, improving codebase testability and expanding future feature development velocity.

Philip Tech World — *MERN Stack Developer*

Jun 2024 – Oct 2024 | Lagos, Nigeria

- Built modular, highly responsive fintech interfaces utilizing **Next.js**, **Tailwind CSS**, and structured **Redux** global state patterns.
- Developed robust server-side REST APIs with **Node.js** and **MongoDB** to handle high-frequency data consumption from frontend applications.
- Implemented custom attendance tracking engines featuring synchronized, timezone-resilient clock-in and clock-out mechanisms.

Forecasters Royale — *Backend Developer*

Jul 2023 – Mar 2024 | Lagos, Nigeria

- Maintained core backend application architectures and real-time operations powered by **Node.js**, **Express.js**, and **MySQL**.
- Engineered and deployed an interactive, automated Telegram bot used for secure onboarding workflows and rapid identity authentication checks.
- Managed multi-tier cloud hosting infrastructure environments and continuous deployment updates using **VPS**, **SSH** keys, and **cPanel** layers.

ArbsKing — *Backend Developer*

Apr 2022 – Feb 2023 | Lagos, Nigeria

- Developed core streaming architectures utilizing **WebSockets** to feed continuous live-data updates to concurrent frontend instances.
- Built high-performance, resilient automation scraper engines with **Playwright** to ingest critical, real-time structured data feeds.
- Optimized application processing speeds by establishing scalable backend load balancing filters and localized application caching techniques.

EDUCATION

Bachelor of Engineering (B.Eng.) in Computer Engineering

Graduation: 2023

Nnamdi Azikiwe University, Awka, Anambra

- **Core Thesis Project:** Designed and implemented an AI-powered sign language translation and interpretation system utilizing custom computer vision modeling.
